Summary

Product analyst who builds the data systems behind the decisions. I turn stakeholder and user feedback into requirements engineering teams can build against, then build the data quality and governance layer that keeps those decisions trustworthy. M.S. in Information Systems, 2+ years across product analytics, project management, and data governance in regulated, technical environments.

Education

M.S. Information Systems — University of Maryland Baltimore County, GPA 3.7/4.0

Graduated: May 2026

B.E. Electronics & Telecommunications Engineering — Savitribai Phule Pune University, GPA 3.5/4.0

Graduated: May 2023

Work Experience

Project Manager — eSurgi, Inc. | Baltimore, MD

Jan 2026 – May 2026

- Cut delivery risk 20% by building a cross-functional tracker that surfaced blockers and dependencies across engineering, clinical, and leadership teams through device launch to go-to-market readiness.
- Converted 50+ physical therapist outreach conversations, including 5 in-depth interviews, into structured product requirements and use cases for engineering and investors.
- Improved stakeholder visibility into launch progress 15% by building and maintaining adoption and milestone dashboards for leadership.
- Shaped the investor-facing go-to-market narrative by contributing product and market content to the pitch deck alongside the CEO and product team.

Product Analyst — Weatherford | Navi Mumbai, India

Jun 2023 – Jun 2024

- Cut reporting turnaround 30% by replacing 15+ manually rebuilt reports with live Power BI and Excel dashboards for product and operations teams.
- Resolved an average of 10 client support tickets weekly on the CygNet SCADA platform by diagnosing and testing root causes, then explaining fixes to nontechnical clients.
- Reduced repeat incidents by using SQL to trace recurring failure patterns in client-reported issues and feeding findings back to engineering.
- Aligned 20+ enterprise clients and engineering as sole technical liaison, translating operational questions into developer-actionable issues.

Associate Product Analyst — TCR Innovation | Mumbai, India (Remote)

Jan 2022 – Jan 2023

- Shaped roadmap priorities by running competitive analysis across 5 to 10 competitor products per project and presenting recommendations directly to stakeholders.
- Identified a pricing gap versus competitors that informed a positioning change in the next product cycle.
- Informed feature and roadmap discussions each cycle by analyzing market trends and competitor positioning.

Events Lead — GEARS, UMBC | Baltimore, MD

Jul 2025 – May 2026

- Cut planning turnaround 15% by replacing ad-hoc task tracking with structured JIRA backlog management across concurrent programs.
- Grew student engagement 20 to 30% by planning and executing cross-department events and workshops for the graduate community.
- Organized a full research symposium, including a poster presentation competition and a 3-Minute Thesis competition, coordinating judges and participants end to end.
- Increased workshop and networking participation by developing and running targeted promotional and outreach strategies.

Projects

Patient Vitals Monitoring Pipeline *GCP Pub/Sub, Dataflow (Apache Beam), BigQuery, Power BI*

- Closed a 4.5% data quality gap in unchecked timestamps by replacing a silent-drop filter with 12 documented rules, validated at zero false positives across 10,000 test records.
- Classified every field for HIPAA sensitivity in a data dictionary defining owner, steward, and custodian roles.

Cloud FinOps Intelligence Platform *AWS, Python, Athena, Glue, Lambda, Streamlit, Prophet*

- Identified \$420K+ in potential waste across \$2.1M+ of cloud spend by validating billing data against 9 quality rules before running analysis in Athena.
- Forecasted budget risk using Prophet and centralized business definitions in shared Athena views so every dashboard reports the same numbers.

AI Event Planning & Engagement System *Scikit-learn, TextBlob, SQLite, Plotly, Streamlit*

- Shipped a solo-built ML and GenAI product on Streamlit Cloud, owning scope, roadmap, and technical execution end to end.
- Caught and fixed a data leakage bug before shipping, then added automated tests and CI so regressions get caught before release.

Student Success Intelligence Platform *Databricks, Apache Spark, Delta Lake, Spark SQL*

- Unified 7.5M+ LMS events and 1.3M+ student activity records into 13+ governed Gold views using a Bronze/Silver/Gold Databricks Lakehouse architecture.
- Built 3 interactive dashboards for leadership, advisors, and department chairs, choosing a rule-based outreach queue over a black-box model so advisors could see why a student was flagged.

Certifications

Atlassian Agile Project Management Professional Certificate | Data-Driven Product Management (LinkedIn Learning) | Essential Design Principles for Tableau (UC Davis) | CAPM (In Progress)

Additional Leadership

President, IETE College Chapter

Pune, India (2022 – 2023)

- Organized seminars and events to help students build knowledge and skills in the field.

President & Vice-President, E&TC Engineering Student Association

Pune, India (2021 – 2023)

- Led technical workshops, managed content development, and coordinated communications across student and faculty groups.
